EXPERIENCE

Amazon: Software Development Engineer Intern

May 2023 – August 2023

- Pioneered an agile latency tracking framework for the AWS Redshift console, impacting 100+ pages and inspiring other AWS console teams to adopt similar strategies for scalability.
- Enhanced latency metrics analytics accuracy by 55% using a TypeScript and React-based framework.
- Developed custom PSQL queries and implemented TestCafe automation tests to validate the framework's efficacy. Following Amazon's test-driven development standard and design patterns.

Meta: Production and Software Engineering Fellowship

May 2022 - December 2022

- Mentored by Facebook engineers in Production Engineering and DevOps, successfully completing real-world projects hosted by MLH.
- Implemented and maintained CI/CD pipelines using GitHub Actions, encompassing redeployment to rigorous unit testing.
- Optimized application uptime and availability using a suite of technologies including Linux Systems, Flask, Docker, VPS, and MySQL.
- Developed a web 3.0 application using C++, interfacing with the Solana blockchain and managing cryptocurrency wallets for an enhanced user experience.

University of Texas at Austin: Quantum Computing Researcher

May 2022 - August 2022

- Developed Python-based solutions for quantum communications, including the BB84 Quantum Key Distribution Protocol and teleportation using entanglement principles.
- Implemented foundational quantum algorithms in Python, such as Deutsch, Simon, Grover, and Shor, demonstrating in-depth expertise in quantum computing applications.
- Automated simulation experiments and visually presented data results using Python & JavaScript, streamlining research processes and insights using pandas and networkx libraries.

EDUCATION / CERTIFICATIONS

University of Texas at Austin

August 2021 – Present

Bachelor of Science in Computational Physics

- Quantum Computing - Freshman Research Initiative Member
- Elements of Computing Certificate
- Scientific Computation and Data Sciences Certificate

Google IT Support Professional Certificate ([Certificate](#))

September 2021

PROJECTS

Ecommerce Storefront - ([GitHub](#))

- An agile Next.js Typescript application that uses Shopify's storefront API or other headless CMS API to build an Ecommerce quickly and reliably. Has +500 sold copies of the project on Esty.

Computer Vision Targeting - ([GitHub](#))

- Used a Raspberry Pi (Linux/Unix) and USB camera to track retro reflective tape with OpenCV in C++.
- It was able to provide crucial info of targets like distance and angle to be used in robotics competitions.

Real Estate App - ([GitHub](#))

- Used Next.js, API calling, and a filter search algorithm so find exact properties from the API.
- Live refresh of property listings when searching or using filters.

SKILLS

Technologies: Docker, Git, CMake, OpenCV, Bash, Nginx, Digital Ocean, Unreal Engine 5, Pandas, .NET

Programming: Python, C, C++, JavaScript, Typescript, Java, Kotlin, Rust, SQL, C#

Web/Other: HTML/CSS, Redux, MongoDB, Next.js, React, Node.js, Angular.js, TensorFlow, Angular

Relevant Coursework: Scientific Computation in Numerical Analysis, Probability I, Calculus (I, II, III), Data Structures and Algorithms, and Parallel Computing.
